

VALVOLE OLEODINAMICHE

HYDRAULICS VALVES

HYDRA[®]
HYDRAULICS VALVES CMR GROUP

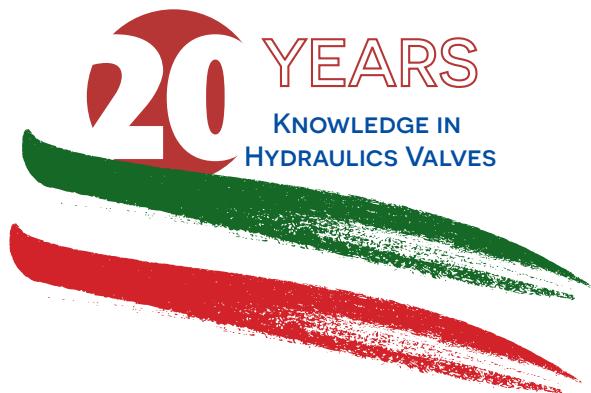

Con il fine di migliorare costantemente la qualità dei nostri prodotti, ci riserviamo il diritto di modificare in qualsiasi momento le caratteristiche senza preavviso. I dati tecnici contenuti nei cataloghi sono puramente indicativi e per maggior accuratezza o ulteriori informazioni, si prega di contattarci. La riproduzione anche parziale del contenuto di questo catalogo è consentita soltanto con specifica autorizzazione di **BT Fluid S.r.l.**. Questo documento è stato redatto con la massima attenzione, tuttavia si declina ogni responsabilità per eventuali errori od omissioni.

In order to constantly improve our products quality, we take the right to make changes to the catalogues at any time without notice. The technical data contained in the catalogs are purely indicative and for greater accuracy or further information, please contact us. No part of this catalogue may be reproduced without specific permission of **BT Fluid S.r.l.**.

This document has been drawn up with the greatest attention. **BT Fluid S.r.l.** denies liability for any possible mistake or omission.

Changing the future of hydraulics

BT Fluid, Società facente parte di **CMR Group**, da oltre 20 anni si occupa di progettazione, produzione e distribuzione di valvole oleodinamiche e componenti idraulici.

Esperienza ed affidabilità sono da sempre i nostri punti di forza.

Sede Legale e Stabilimento Produttivo 1 - Legal Headquarters and Production Plant 1

Sede Principale - Headquarters

BT Fluid, company belonging to **CMR Group**, have been designing, manufacturing and distributing valves and hydraulic components for over 20 years.

Experience and reliability have always been our strong points.

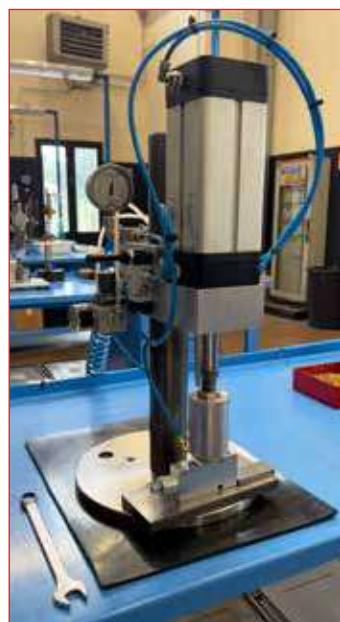

Nuovo Stabilimento Produttivo 2 - New Production Plant 2

Severi controlli eseguiti regolarmente sui prodotti finali, sui componenti terze parti e sulle materie prime, garantiscono qualità e performance dei prodotti, in linea con i più alti standard di mercato.

Un parco macchine di produzione tecnologicamente avanzato, competenze acquisite nel corso degli anni, l'elevata professionalità dei collaboratori del nostro Ufficio Tecnico, consentono di proporre soluzioni e di realizzare prodotti in base alle più svariate esigenze, rispondendo in tempi brevi.

Elasticità e flessibilità dei processi interni, consentono di adattare i cicli produttivi standard alle particolari urgenze dei Clienti.

Strict controls performed regularly on final products, third-party components and raw materials guarantee product quality and performance, in line with the highest market standards.

A technologically advanced production machine park, skills acquired over the years, the high professionalism of our Technical Office collaborators, allow us to propose solutions and create products based on the most varied needs, responding quickly.

Elasticity and flexibility of internal processes allow us to adapt standard production cycles to the particular urgencies of Customers.

► Fluido idraulico Hydraulic Fluid

Il fluido idraulico deve avere caratteristiche fisiche, lubrificanti e chimiche tali da renderlo idoneo all'impiego in impianti oleodinamici, come ad esempio olio idraulico a base minerale HL DIN 51524 Parte 1 e HLP DIN 51524 Parte 2. Il grado di viscosità ISO 3448 viene indicato con lettere ISO VG seguite da un numero che rappresenta la viscosità cinematica media a 40 °C in mm²/s o centiStokes (cSt).

Gradi Di Viscosità Viscosity Class	Viscosità Cinematica Kinematic Viscosity (cSt)		
	max a/at 0°C	media a/at 40°C	min a/at 100°C
ISO VG 10	90	10	2,4
ISO VG 22	300	22	4,1
ISO VG 32	420	32	5,0
ISO VG 46	780	46	6,1
ISO VG 68	1400	68	7,8
ISO VG 100	2560	100	9,9

► Filtrazione Contamination - Filtration

Premessa: Una delle più frequenti cause di avarie negli impianti oleodinamici è l'eccessiva contaminazione dell'olio. Le particelle di impurità, soprattutto quelle dure e abrasive, usurano le superfici dei componenti oleodinamici e danneggiano le sedi di tenuta, provocando trafileamenti interni e malfunzionamenti. Per il corretto funzionamento delle valvole, il livello di contaminazione massimo dell'olio non deve generalmente eccedere i limiti delle classi 19/15 ISO-4406, ovvero 10+11 NAS-1638 (vedi tabella), salvo eventuali prescrizioni più restrittive che troverete indicate nelle schede tecniche delle valvole interessate. Rapporto di filtrazione (β_x): è un dato che caratterizza ciascun tipo di filtro e rappresenta il rapporto tra il numero di particelle presenti prima e dopo il filtro aventi un diametro maggiore di X micron.

La filtrazione assoluta secondo la norma ISO 4572 definisce il diametro (X) delle particelle più grandi che un filtro è in grado di trattenere, garantendo un'efficienza molto alta, spesso indicata con un valore Beta (β_x) ≥ 75, che significa che per ogni 75 particelle che entrano nel filtro, meno di 1 esce. Si tratta di un'efficienza di ritenzione superiore al 98,7% per quella specifica dimensione, misurata tramite il metodo multi-pass (multi-flusso). Classe di contaminazione secondo ISO-4406: viene espressa mediante 2 numeri che indicano rispettivamente la quantità di particelle con diametro superiore a 5 micron e 15 micron presenti in 1ml di olio. Classe di contaminazione secondo NAS-1638: viene espressa mediante un numero che indica la quantità di particelle di diverse dimensioni presenti in 100 ml. di olio.

Hydraulic fluid must have physical, lubricating and chemical properties suitable for use in hydraulic systems such as, for example, mineral based oil HL DIN 51524 Part 1 and HLP DIN 51524 Part 2. ISO 3448 viscosity class is expressed by ISO VG followed by one number representing the medium kinematic viscosity at 40°C in mm²/s or centiStokes (cSt).

General information: very often the cause of malfunctions in hydraulic systems and components is found to be excessive fluid contamination. In particular the hard and abrasive particles in the fluid wear the hydraulic components and prevent the poppets from re-seating, with consequent internal leakage and system inefficiency. For the correct operation of valves it is necessary to ensure that the oil contamination level does not exceed the limits given in class 19/15 ISO-4406, or 10+11 NAS-1638 (see chart), unless otherwise specified in the relevant technical sheet. Filtration ratio (β_x): it's the ratio between the number of particles before and after the filter with diameter larger than X micron.

Absolute filtration according to ISO 4572 defines the diameter (X) of the largest particles a filter can retain, ensuring very high efficiency, often indicated by a Beta value (β_x) ≥ 75, meaning that for every 75 particles that enter the filter, less than 1 exits. This is a retention efficiency greater than 98.7% for that specific size, measured using the multi-pass (multi-flow) method. Contamination class ISO-4406: it's expressed by two scale numbers representing the number of particles larger than 5 micron and larger than 15 microns contained in 1 ml. of fluid. Contamination class NAS-1638: it's expressed by one scale number representing the number of particles of different size ranges contained in 100 ml. of fluid.

Tipo di sistema - Tipo di valvola Type of system - Type of valve	Raccomandazioni per la filtrazione dell'olio Oil filtration recommendations		
	Classe di pulizia raccomandata Cleanliness class recommended		Filtrazione assoluta (valutazione in micron) Absolute filtration (micron rating)
	ISO 4406:1999	NAS 1638	
ALTA PRESSIONE - HIGH PRESSURE > 250 bar (3600 psi) Componenti con BASSA tolleranza allo sporco Components with LOW dirty tolerance	18 / 16 / 13	7-8	5
MEDIA PRESSIONE - MEDIUM HIGH PRESSURE Componenti con MODERATA tolleranza allo sporco Components with MODERATE dirty tolerance	19 / 17 / 14	9	10
BASSA PRESSIONE - LOW PRESSURE < 100 bar (1500 psi) Componenti con BUONA tolleranza allo sporco Components with GOOD dirty tolerance	20 / 18 / 15	10-11	20

► Collettori Bodies

Valvole con collettore in acciaio

Il collettore viene realizzato in Acciaio AV-PB (9SMnPb28 o 32) e viene protetto mediante zincatura bianca.

Steel bodies

The bodies are realized in AV-PB (9SMnPb28 or 32) zinc plated.

► Cartucce Cartridges

Di tipo avvitabile, possono essere inserite nell'apposita cavità ricavata direttamente nell'attuatore (cilindro, motore, pompa,...) o in blocco integrato.

Sono realizzate in Acciaio AV-PB (11SMnPb37) oppure Ng2Pb (16NiCr4) per i particolari interni di tenuta meccanica. Tutti i particolari interni vengono temprati e sottoposti a rettifica o lappatura in modo da assicurare la massima affidabilità di resistenza. L'involucro esterno viene protetto mediante trattamenti di zincatura bianca o brunitura (nera).

Screw type, can be attached directly on the actuator or in integrated blocks.

The cartridges are realized in AV-PB (11SMnPb37) steel or Ng2Pb (16NiCr4) for internal mechanical parts. All the internal parts are hardened and rectified or lapped to ensure the maximum reliability and resistance. The external shell is zinc plated (white) or burnished (black).

► Installazione delle cartucce Cartridge installation

Si raccomanda di seguire scrupolosamente la seguente procedura:

- Assicurarsi che la cartuccia non sia sporca o non siano presenti contaminazioni esterne ;
- Assicurarsi che gli o-ring e gli anelli antiestrusione siano integri e correttamente montati ;
- L'o-ring deve essere montato verso la bocca a pressione più alta se è presente un solo anello antiestrusione, oppure tra due anelli antiestrusione se entrambe le bocche possono ricevere olio ad alta pressione ;
- Immergere la cartuccia in olio pulito ;
- Avvitare la cartuccia A MANO finché s'incontra l'o-ring, quindi serrare con chiave dinamometrica alla coppia di serraggio riportata sulle pagine di catalogo relative alla cartuccia.

It's recommended to follow these steps:

- Inspect the cartridge to ensure that it is in good condition and no external contaminant is present ;
- Check that o-rings and back-up rings are intact and correctly positioned ;
- The o-ring should be towards the higher pressure port if only one back-up ring is present or between double back-up rings if both ports receive high pressure ;
- Dip the cartridge in clean oil ;
- Screw the cartridge in BY HAND until the o-ring is met, then tighten with a wrench to the torque specified in the cartridge catalog page.

► Tarature Pressure Setting

Le valvole Hydra® sono tarate al valore di pressione standard indicato nel corrispondente foglio catalogo. Qualora necessiti alterare questa taratura, assicurarsi di non uscire dal campo di taratura indicato nello stesso foglio.

Hydra® valves are supplied pre-set at the standard pressure setting shown by the relevant catalogue sheet. Whenever the application requires a re-adjustment, please ensure that the limits of the indicated pressure range are never exceeded.

► Attacchi Ports

Gli attacchi filettati sono normalmente del tipo GAS cilindrico (BSPP) nelle dimensioni da 1/4" GAS a 1"1/4. Altri tipi di attacchi filettati sono disponibili a richiesta. A disposizione una vasta gamma standard (SAE, CETOP) e specifiche per motori idraulici.

Port are usually GAS type (BSPP) from 1/4" GAS to 1"1/4. Different ports sizes are available on request. A range of standard flanges (SAE, CETOP) and hydraulic motor specific flanges is also available.

► O-ring O-rings

Gli o-ring vengono utilizzati per realizzare tenute statiche (quando non sussistono movimenti reciproci tra le parti) e dinamiche (quando ci si trova in presenza di movimento relativo delle parti).

La scelta della dimensione ottimale dell'o-ring è fondamentale per realizzare la tenuta. Si raccomanda, in caso di necessità di sostituzione, di utilizzare gli stessi o-ring specificati nella documentazione BT Fluid.

Gli o-ring vengono forniti standard con mescola NBR (durezza 70 Shore A - nitrile-butadiene) secondo DIN ISO 1229.

Ove risulta possibile l'espulsione degli o-ring dalle loro sedi a causa della pressione vengono utilizzati anelli anti-estruzione Parbak (durezza 90 Shore A). Nel caso sia presente un solo anello antietrusione, va sempre montato sul lato non in pressione della tenuta rispetto all'O-Ring.

► Conservazione a magazzino delle valvole nuove Stocking of new valves

Le valvole vanno conservate protette nel loro involucro termoretraibile, lontane dall'irraggiamento solare o da sorgenti di calore e di ozono (evitare la vicinanza con motori elettrici funzionanti) in un ambiente con temperatura tra -20°C e +50°C.

► Informazioni sulla garanzia Warranty information

Garanzia limitata

- BT Fluid garantisce che i prodotti sono esenti da difetti di materiale o di costruzione per un periodo di 12 mesi a partire dalla data di spedizione dallo stabilimento.
- La garanzia è esclusivamente limitata alla riparazione o sostituzione, a giudizio della BT Fluid e presso i propri stabilimenti, di ogni parte o parti difettose in materiale o costruzione, previo esame dei pezzi che devono essere restituiti alla BT Fluid, franco destino, corredati di descrizione dettagliata del malfunzionamento.
- Le merci possono essere rese solo previa autorizzazione scritta da parte della BT Fluid
- L'imballo è escluso dal prezzo dei materiali.
- BT Fluid declina ogni responsabilità ed esclude l'applicazione della garanzia per quei prodotti che, a proprio insindacabile giudizio, siano stati contaminati, impiegati erroneamente o manomessi in circostanze al di fuori del proprio controllo o senza autorizzazione. La garanzia decade qualora siano state apportate modifiche a circuiti o impianti tali da influenzare negativamente il funzionamento dei prodotti BT e per prodotti riparati, modificati o semplicemente smontati anche parzialmente al di fuori degli stabilimenti BT Fluid.
- In nessun caso la rivalsa di garanzia potrà comportare revoche contrattuali, sospensioni anche parziali di pagamenti, compensi per danni o rimborsi spese, ivi compresa la spesa di mano d'opera per la sostituzione del pezzo.
- Questa garanzia esclude e sostituisce ogni altra garanzia di qualsiasi genere.
- BT Fluid è esonerata da ogni responsabilità diretta o indiretta e da ogni obbligazione per qualsiasi danno alle persone o cose che possa comunque verificarsi per o durante l'uso della merce fornita, per causa o dipendenza della medesima, anche durante il collaudo e anche se l'incidente è derivato da difetto di costruzione e nei materiali, ivi comprese eventuali perdite economiche conseguenti a fermo macchina, o ritardate consegne di qualsiasi genere.

The o-rings are used to realize static (when the parts don't move) and dynamic (when there's movement between the parts) seal.

The right dimension of the O-Ring is fundamental to realize the seal. It's highly recommended, in case the O-Ring has to be replaced, to use exactly the same models specified in the BT Fluid documentation.

O-rings are supplied standard in NBR (hardness 70 Shore A - nitrile-butadiene) DIN ISO 1229.

Where the o-rings is subject to expulsion from its seat, due to pressure, Parbak rings (hardness 90 Shore A) are used. When a single Parbak ring is used, it should always be mounted on the which is not under pressure with respect to the o-rings.

Encapsulated by a protective wrapping, the valves shall not be exposed to direct sun light nor to sources of heat or ozone (like electric motors running), at a temperature between -20°C and +50°C

Limited warranty

- BT Fluid warrants that its products are free from defects in material and workmanship for a period of 12 months from the date of shipment from the factory.
- The warranty is strictly limited to the repair or replacement, at BT Fluid option and at BT Fluid factory, of any part or parts defective in material or workmanship, subject to BT Fluid examination of the part which must be returned to BT Fluid, carriage pre-paid by the Customer, with a detailed description of the malfunction.
- Items can be returned only after written authorization by BT Fluid.
- The packing is excluded from the cost of materials.
- BT Fluid shall not be responsible for circumstances beyond its control and this warranty shall not apply to products which, in the sole judgment of BT Fluid have been subjected to contamination, tampering, negligent handling, misapplication or other misuse. Changes in other components which may adversely affect the products by BT Fluid, or component which have been repaired, modified or simply disassembled out of BT Fluid factory products, shall make this warranty void.
- In none of the cases quoted in the above paragraphs can the customer claim the cancellation of the contract, compensation of damages or reimbursement of any expenses as, for example, labor required to replace the defective parts.
- This warranty excludes and replaces any other warranty of any kind.
- BT Fluid is exempt from any direct or indirect responsibility and from any obligation for any damage to persons or things that may in any way occur for or during the use of the goods supplied, due to or dependent on the same, even during testing and even if the incident is derived from a defect in construction and materials, including any economic losses resulting from machine downtime, or delayed deliveries of any kind.

Legge applicabile e foro competente

- Le presenti Condizioni Generali devono essere interpretate ed eseguite ai sensi della legge italiana. Qualsiasi controversia dovesse insorgere tra le Parti in ordine alla validità, esistenza, efficacia, interpretazione, esecuzione e/o risoluzione delle Condizioni Generali, o comunque derivante dalle stesse, sarà competenza esclusiva del Foro di Reggio Emilia.

Responsabilità d'uso

- Tutti i prodotti **Hydra**® sono sottoposti a rigorosi collaudi funzionali, conformemente alle caratteristiche riportate sulla relativa documentazione tecnica. Dal momento che le reali condizioni di funzionamento delle apparecchiature del Cliente non sono riproducibili integralmente nei laboratori di prova della BT Fluid, la responsabilità della scelta e la idoneità dei prodotti sono a carico del Cliente stesso, anche se suggeriti dal personale della BT Fluid.
- BT Fluid si riserva il diritto di cessare la produzione di qualsiasi modello o di variarne specifiche e disegni in ogni momento senza preavviso e senza incorrere in obblighi.
- Il presente catalogo annulla e sostituisce la precedente documentazione tecnica riguardante i prodotti BT Fluid.

Prescrizioni d'uso

- È fatto divieto assoluto al Cliente di impiegare i prodotti Hydra ad usi diversi da quelli descritti nei disegni esecutivi o nei cataloghi tecnici BT Fluid. Qualora il Cliente intedesse utilizzare i prodotti acquistati per applicazioni differenti, è consigliabile consultare preventivamente l'Ufficio Tecnico BT Fluid per le autorizzazioni specifiche a procedere. In caso contrario, se il Cliente utilizza i prodotti Hydra ugualmente in modo non idoneo, BT Fluid è sollevata da ogni responsabilità.
- Le valvole **Hydra**® sono sottoposte a collaudi funzionali in conformità alle specifiche riportate nella relativa documentazione tecnica. Poichè le effettive e dettagliate condizioni di funzionamento dell'apparecchiatura del Cliente possono non essere integralmente riproducibili nei laboratori di prova BT Fluid, la completa idoneità all'uso è responsabilità del Cliente. Normalmente il Cliente validerà il prodotto attraverso la costruzione di uno o più prototipi da sottoporre ad un completo ciclo di prove funzionali.

Dichiarazione

- Le valvole ed i blocchi **Hydra**® riportati nel presente catalogo tecnico, sono destinati ad essere incorporati in macchine a cui si applica la Direttiva 2006/42/CE (Direttiva Macchine) e successivi emendamenti. È fatto divieto di mettere in funzione le valvole o i blocchi integrati prima che la macchina in cui sono incorporati sia dichiarata conforme alle disposizioni della direttiva di riferimento.

Procedura accettazione ordini

- Gli ordini devono essere inviati alla BT Fluid per e-mail o fax, non saranno accettati ordini telefonici. L'ordine è valido nei termini ed alle condizioni espresse nella nostra conferma d'ordine.

Gli ordini devono chiaramente indicare:

- Esatta ragione sociale e indirizzo completo del richiedente, con numero di telefono e di fax - numero e data d'ordine codice d'ordinazione completo e denominazione valvola, specificando la taratura ove richiesto - data consegna richiesta destinazione merce e vettore.

Jurisdiction

- These Terms and Conditions shall be interpreted and enforced in accordance with Italian law. Any dispute arising between the Parties regarding the validity, existence, effectiveness, interpretation, enforcement, and/or termination of the Terms and Conditions, or otherwise arising therefrom, shall be subject to the exclusive jurisdiction of the Court of Reggio Emilia.

Responsibility for use

- All **Hydra**® products are checked and tested, in accordance with the specifications indicated in the relevant technical documentation. Since the actual installation and performance of the Customer's equipment cannot be exactly reproduced in the BT Fluid testing laboratories, the assurance of suitability of all BT Fluid products in the Customer application is the responsibility of the Customer himself, even if suggested by BT Fluid.
- BT Fluid reserves the right to discontinue models at any time or change specifications or designs without notice and without incurring in any obligations.
- This catalogue excludes and supersedes any previous data sheet about BT Fluid products.

User instructions

- The Customer is strictly prohibited from using Hydra products for purposes other than those described in the executive drawings or BT Fluid technical catalogs. If the Customer intends to use the purchased products for other applications, it is advisable to consult the BT Fluid Technical Department in advance for specific authorizations to proceed. Otherwise, if the Customer uses Hydra products inappropriately, BT Fluid is released from all liability.
- All **Hydra**® valves are tested and checked in compliance with the specifications shown by the relevant documents. Since the actual detailed performance of the buyer's equipment cannot be totally reproduced in BT Fluid's testing laboratory, the full assurance of suitability of BT Fluid valves in the Buyer's applications is the responsibility of the buyer. Generally the Buyer will validate the valve in his own application by manufacturing a prototype to be submitted to a full testing program.

Statement

- The valves and the multifunction integrated blocks **Hydra**® described in this catalogue can be employed in systems or machines falling into the specifications of Directive 2006/42/EC (Machine Directive) and later amendments. The valves and the blocks shall not be operated before the complete machine is verified to be in compliance with the requirements of the above mentioned Directive.

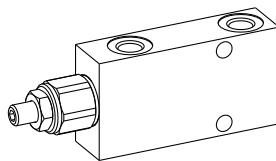

Order entry procedure

- Orders must be sent to BT Fluid by e-mail or fax, orders made by telephone can not be accepted. The order is valid only at the terms and conditions written in our order confirmation.

Orders must clearly show:

- The corporate name and the full address of the applicant, with telephone and fax number - order number and date full ordering code number and valve denomination, specifying the valve setting if required - required delivery date goods destination and carrier.

Strozzatore bidirezionale regolabile a vite
Screw adjustable bidirectional throttle

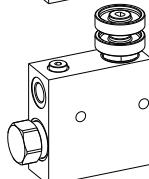

Pag. 70

HVFT

Regolatore di flusso a 3 vie compensato, con eccedenza in scarico
3 way pressure compensated, flow control valve with excess to tank

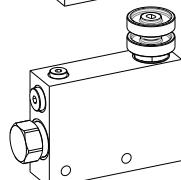

Pag. 71

HVFTU

Regolatore di flusso a 3 vie compensato, con eccedenza in scarico e valvola di non ritorno
3 way pressure compensated, flow control valve with excess to tank with check valve

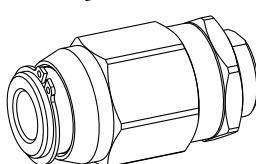

Pag. 72

HVFP

Regolatore di flusso a 3 vie compensato, con eccedenza in pressione
3 way pressure compensated flow control valve with excess to pressure

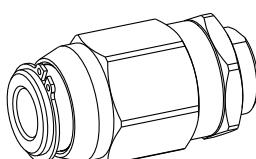

Pag. 73

HRU

Regolatore di flusso a manicotto unidirezionale
Undirectional hexagonal needle valve

Pag. 83

HRB

Regolatore di flusso a manicotto bidirezionale
Bidirectional hexagonal needle valve

Pag. 84

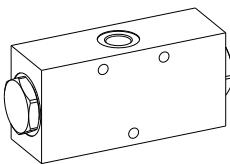

HCVF.S08

Valvola regolatrice di flusso a cartuccia, SAE08
Flow control valve, cartridge type, SAE08

Pag. 96

Valvole divisori - Riunificatori di flusso Flow dividers - Combiner valves

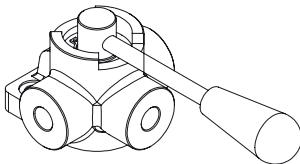

HVFD

Valvole divisori - Riunificatori di flusso
Combiner valves

Pag. 82

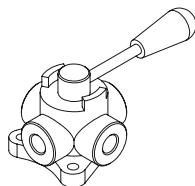

Deviatori - Rubinetti Diverters - Ball valves

HVD3

Deviatore di flusso a 3 vie
3-way diverter valve

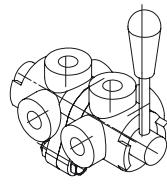

Pag. 74

HVD4

Deviatore di flusso a 4 vie
4-way diverter valve

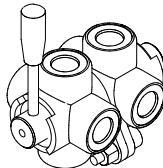

Pag. 75

HVD6

Deviatore di flusso a 6 vie
6-way diverter valve

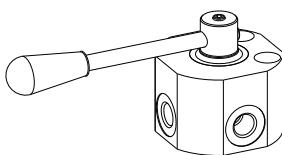

Pag. 76

HVD8

Deviatore di flusso a 8 vie
8-way diverter valve

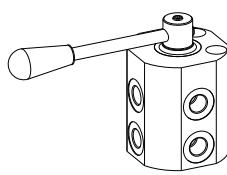

Pag. 77

HVDDFA/C3

Deviatore di flusso a 3 vie alta pressione
High pressure 3-way diverter valve

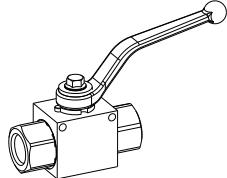

Pag. 78

HVDDFA/C6

Deviatore di flusso a 6 vie alta pressione
High pressure 6-way diverter valve

Pag. 79

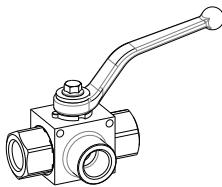

HVB2

Rubinetto a sfera 2 vie
2-way ball valve

Pag. 80

Deviatori - Rubinetti

Diverters - Ball valves

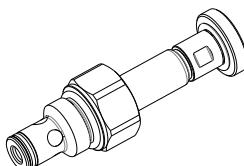

HVB3

Rubinetto a sfera 3 vie
3-way ball valve

Pag. 81

Elettrovalvole a cartuccia

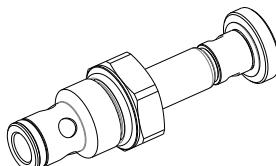

Solenoid valve, cartridge type

HCVS.S08

Elettrovalvola a cartuccia a 2 vie pilotata, N.C. SAE08
Solenoid valve, cartridge type, pilot operated, N.C. SAE08

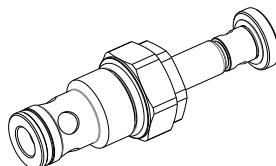

Pag. 97

HCVS.S10

Elettrovalvola a cartuccia a 2 vie pilotata, N.C. SAE10
Solenoid valve, cartridge type, pilot operated, N.C. SAE10

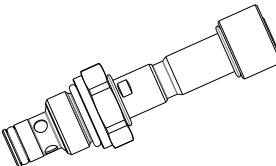

Pag. 98

HCVS.S12

Elettrovalvola a cartuccia a 2 vie pilotata, N.C. SAE12
Solenoid valve, cartridge type, pilot operated, N.C. SAE12

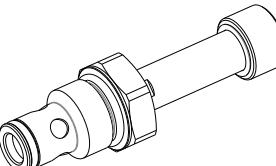

Pag. 99

HCVS0.S08

Elettrovalvola a cartuccia a 2 vie pilotata, N.A. SAE08
Solenoid valve, cartridge type, pilot operated, N.O. SAE08

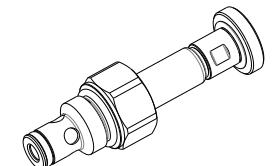

Pag. 100

HCVS0.S10

Elettrovalvola a cartuccia a 2 vie pilotata, N.A. SAE10
Solenoid valve, cartridge type, pilot operated, N.O. SAE10

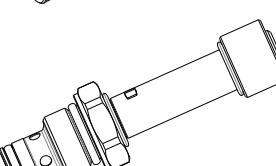

Pag. 101

HCVSG.S08

Elettrovalvola a cartuccia a 2 vie pilotata, N.C. SAE08
Solenoid valve, cartridge type, pilot operated, N.C. SAE08

Pag. 102

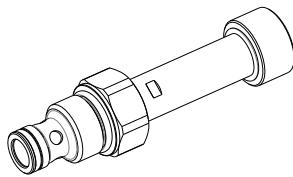

HCVSD.S08

Elettrovalvola a cartuccia a 2 vie ad azione diretta a doppia tenuta, N.C. SAE08
Solenoid valve, cartridge type, direct acting, double lock, N.C. SAE08

Pag. 103

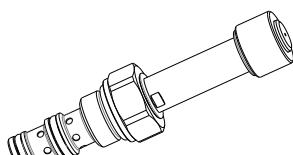

Elettrovalvole a cartuccia Solenoid valve, cartridge type

HCVSD.S10

Elettrovalvola a cartuccia a 2 vie ad azione diretta a doppia tenuta, N.C. SAE10
Solenoid valve, cartridge type, direct acting, double lock, N.C. SAE10

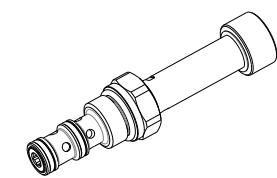

Pag. 104

HCVST.S08

Elettrovalvola a cartuccia a 3 vie e 2 posizioni, SAE08
Solenoid valve, cartridge type, poppet model 3/2, SAE08

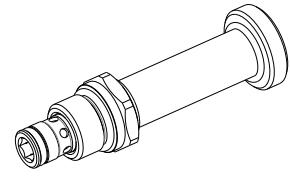

Pag. 105

HCVST.S10

Elettrovalvola a cartuccia a 3 vie e 2 posizioni, SAE10
Solenoid valve, cartridge type, poppet model 3/2, SAE10

Pag. 106

HCVP2

Proporzionale a cartuccia a 2 vie, SAE08
Proportional cartridge valve, 2 way, SAE08

Pag. 107

HCVB

Collettori standard alluminio/acciaio
Standard aluminium / steel manifolds

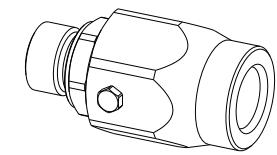

Pag. 108

HC

Bobine - Connettori
Coils - Connectors

Pag. 109

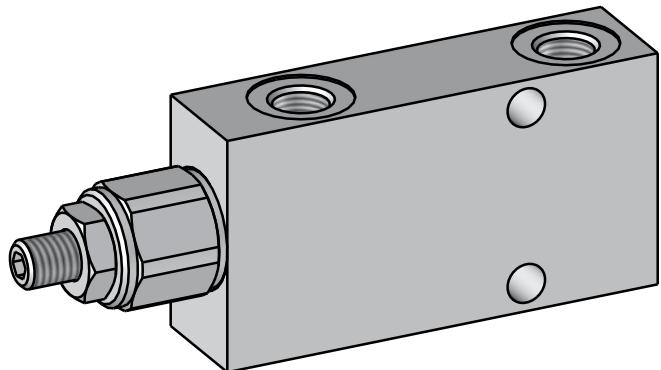

HGG

Giunti girevoli in linea
In line rotating couplings

Pag. 112

Una valvola di sfiato idraulica a vite, a cartuccia, ad azione diretta, di tipo a otturatore, normalmente chiusa. Viene tipicamente utilizzato per proteggere i componenti idraulici dai transitori di pressione. Quando la pressione all'ingresso (1) raggiunge la taratura della valvola, la valvola inizia ad aprirsi al serbatoio (2) e grazie all'effetto del deflettore integrato nell'otturatore fornisce un limitato aumento di pressione. La cartuccia offre un'eccellente risposta alle variazioni di carico nei circuiti idraulici che richiedono basse perdite interne e isteresi limitata.

A screw-in, cartridge style, direct acting, poppet type, normally closed hydraulic relief valve. It's typically used to protect hydraulic components from pressure transients. When the pressure at the Inlet (1) reaches the valve setting, the valve starts to open to tank (2) and thanks to the effect of the deflector integrated into the poppet it provides a limited pressure rise. The cartridge offers excellent response to load changes in hydraulic circuits requiring low internal leakage as well as limited hysteresis.

► Diagramma Perdite Di Carico
 Pressure Drop Curves

La valvola unisce in un'unica cartuccia compatta la tipica funzione di valvola di sfioro e anticavitazione tramite la valvola di ritegno. Si tratta di una valvola ad otturatore a vite, pilotata (2 stadi), normalmente chiusa. Quando la pressione all'ingresso (1) raggiunge la taratura della valvola, l'otturatore pilota inizia ad aprirsi dalla sua sede e determina lo spostamento dell'otturatore stadio principale che strozza il flusso dell'olio al serbatoio (2). Nella funzione di flusso inverso libero una leggera molla di polarizzazione consente un facile passaggio del flusso dal lato al naso (da 2 a 1). La cartuccia offre una transizione graduale in risposta alle variazioni di carico nei circuiti idraulici impegnativi. Risposta regolare, aumento di pressione ridotto e isteresi limitata.

The valve combines in one compact cartridge the typical function of relief valve and anticavitation through the check valve. It's a screw-in, pilot operated (2-stage), poppet type, normally closed valve. When the pressure at the Inlet (1) reaches the valve setting, the pilot poppet starts to open from its seat and determines the shifting of the main stage poppet that throttles oil flow to tank (2). In the free reverse flow function a light bias spring allows for ease of flow passage from side to nose (2 to 1). The cartridge offers smooth transition in response to load changes in demanding hydraulic circuits. Smooth response, reduced pressure rise and limited hysteresis.

 Pressure Drop Curves

Valvola a cartuccia avvitabile a 2 vie a 2 posizioni, normalmente chiusa, a comando eletromagnetico, ad otturatore pilotato. Tipicamente utilizzato come dispositivo di blocco o mantenimento del carico per circuiti ad alta pressione. Quando la bobina è disaccoppiata, HCVS.S08.X funge da valvola di ritegno consentendo il flusso libero da 1 a 2, mentre blocca da 2 a 1. Quando la bobina è eccitata, l'otturatore si solleva ed apre il percorso del flusso 2 a 1. In questa modalità di funzionamento, il flusso da 1 a 2 è fortemente limitato. Il design rigido che utilizza un corpo in un unico pezzo contribuisce a ridurre al minimo l'effetto delle eccentricità nella cavità e fornisce una grande affidabilità. Basse perdite di carico grazie al percorso del flusso ottimizzato.

Solenoid operated, 2-way 2-positions, normally closed, piloted poppet type, screw-in cartridge valve. Typically used as a blocking or load holding device for high pressure circuits. When the coil is de-energized, the HCVS.S08.X acts as check valve allowing free flow from 1 to 2, while blocking from 2 to 1. When the coil is energized the poppet lifts and opens both the 2 to 1 and the 1 to 2 flow paths. The rigid design using a 1-piece body contributes to minimize the effect of eccentricities in cavity and provides great reliability. Low pressure drop thanks to optimized flow path.

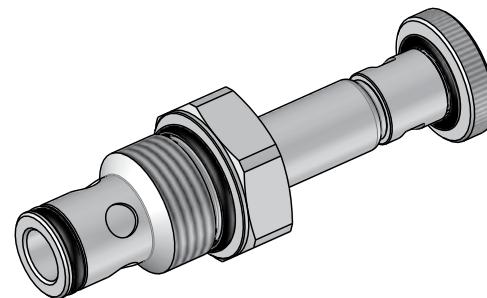

Valvola a cartuccia avvitabile, a comando elettronico, 2 vie 2 posizioni, normalmente chiusa, ad otturatore pilotato. Tipicamente utilizzato come dispositivo di blocco o mantenimento del carico per circuiti ad alta pressione. Quando la bobina è disaccoppiata, HCVS.S08.C funge da valvola di ritegno consentendo il flusso libero da 1 a 2, mentre blocca da 2 a 1. Quando la bobina è eccitata, l'otturatore si solleva e apre sia i percorsi di flusso da 2 a 1 che da 1 a 2. Il design rigido che utilizza un corpo monopezzo contribuisce a ridurre al minimo l'effetto delle eccentricità nella cavità e fornisce una grande affidabilità. Perdite di carico ridotte grazie al percorso del flusso ottimizzato.

HCVP2 è una valvola idraulica a cartuccia avvitabile, a due vie, di tipo a otturatore, normalmente chiusa, ad azionamento proporzionale a solenoide, per applicazioni di blocco e tenuta del carico a basse perdite. Quando è dissecata, la valvola funziona come una valvola di ritegno e consente il flusso da 1 a 2, mentre blocca il flusso da 2 a 1. Quando è eccitata, la valvola apre il percorso del flusso 2 a 1: il flusso è proporzionale alla corrente applicata alla bobina.

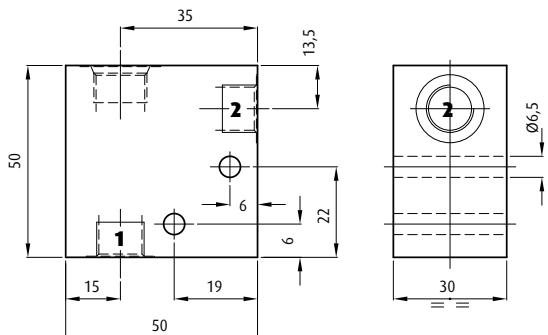

The HCVP2 is a proportional solenoid operated, two-way, poppet type, normally closed, screw-in hydraulic cartridge valve for low leakage blocking and load holding applications. When de-energized, the valve operates as a check valve and allows flow from 1 to 2, while blocking flow from 2 to 1. When energized, the valve opens 2 to 1 flow path: flow is proportional to the current applied to the coil.
